

Dear Diary,

You'll never guess what? Today something awesome happened! Something I've dreamt of all of my life... I finally went to space!

After breakfast, I was feeling bored so I decided to go into the garage and have a look at some of the old junk that was in there. I came across bits and pieces of metal all shapes and sizes so I decided to build myself a rocket, it looked so cool. I opened the door and hopped in and before I knew it, I was whizzing through space past thousands of bright, twinkling stars.

As I continued to race upwards, I realised that there was something wrong with my rocket and I ended up landing on a planet. It was a very bare planet, in fact there was nothing on it at all! Great, I thought to myself, stuck on a desolate planet with no way home, I felt petrified! Suddenly a space ship came flying towards me and landed right beside me. Then a blue alien stepped out, he looked kind of friendly but it was still an alien! He kept pointing to his space ship and shaking his head. I realised that his spaceship had broken down too! Double trouble I thought to myself, things couldn't get any worse. Then an idea popped into my head.

I took out my parachute and glided slowly back down to Earth. This morning, in the garage, I remembered seeing a tool box and some ladders. In no time, I was on my way back to the mysterious planet and my new alien friend. After a long climb, I eventually reached the planet. I managed to work out what the problem was and I fixed both my rocket and the spaceship, how relieved I was! The friendly, blue alien smiled and waved goodbye. I realised I should get back home too and before I knew it, I landed back to Earth with a bang.

This was the best day ever! I wonder what I will find in the garage tomorrow?

Bye for now

Zac
